

Endotoxin-Free Plasmid DNA Extraction Mini Kit

The kit is designed to lysis the cell by alkali pyrolysis, then to specifically adsorb DNA using a centrifugal adsorption column in the state of high-salt. Endotoxin scavenging agent can efficiently clean out endotoxin from the plasmid solution. Purified plasmid contains endotoxin less than 0.1EU/ug. The silicon matrix of centrifugal adsorption column can efficiently and exclusively adsorb DNA and exclude the protein of impurities and other organic compound. 5–15ug pure and high copies of plasmid DNA can be fast extracted from 1-5ml LB (Luria-Bertani), and the extraction rates peak to 85–90 %.

The Endotoxin-Free Plasmid DNA could be used for a broad range of routine application, including enzyme digestion, PCR, library construction, Southern Blotting etc.

Catalog No.	110003
Size	50 preps
Product Category	Nucleic Acid Isolation
Application	Purify 5–15ug pure and high copies of Endotoxin-Free Plasmid DNA
Storage/Stability	Ambient & -20°C/1 year
Shipping	Ambient & Gel Packs
